SOFTWARE ENGINEER

Senior software engineer with 5+ years of experience at Meta, currently transitioning into AIxBio

SKILLS

Languages/Frameworks - Python, Kotlin, Java, JavaScript, SQL

WORK EXPERIENCE

Meta (Software Engineer)

08/2020 – 04/2026

- Emoji Pong Challenge: Led a team of 5 eng to integrate game score sharing via Instagram DMs over a 2 month project, increased daily active users by 598.8M
- Messenger Design System (MDS): Android tech lead for MDS, overseeing the UI component library used by product teams across Messenger
- Lead Organizer for Effective Altruism @ Meta: Organized annual internal charity fundraisers, raising approximately \$120K over three years for impactful causes

Meta (Software Engineering Intern)

06/2019 – 09/2019

- Built a full-stack web application using JavaScript/React, PHP, and GraphQL for moderating low quality and harmful content enabling content moderation for thousands of media uploads through Oculus Media Studio
- Made UI improvements to the flow for uploading VR content through Oculus Media Studio:

RESEARCH & TRAINING

Supervised Program in Alignment Research (Mentee)

Feb 2026 – Present

- Conducting research on biosecurity talent pipelines under Dr. Sengupta with a focus on AIxBio
- Built end-to-end data pipeline for classifying and extracting biosecurity programs globally

BlueDot Impact — Biosecurity Course (Program Participant)

Jan 2026

- Completed training covering biological risk landscape, pandemic preparedness frameworks, dual-use research policy, and biosurveillance methods
- Conducting capstone research project mapping technical and policy skillsets to key biosecurity interventions

EDUCATION

Stanford University (B.S. in Computer Science)

Class of 2020

- Concentration in Computer Graphics; coursework in NLP and Deep Learning

PROJECTS

SRA Batch Downloader

- Built a Python tool to automate bulk retrieval and processing of genomic sequence data from NCBI's Sequence Read Archive (SRA), supporting bioinformatics workflows
